

VariQuest[®] Work Instructions

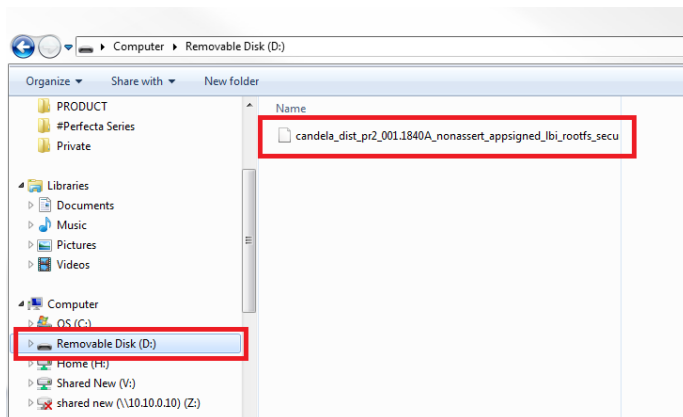

Perfecta[®] STP Series Firmware Upgrade

This how-to guide provides instructions on upgrading the firmware on a Perfecta[®] STP Series Printer.

1. Download the firmware file.
2. **Right click** on the zip file and select **Extract All...**

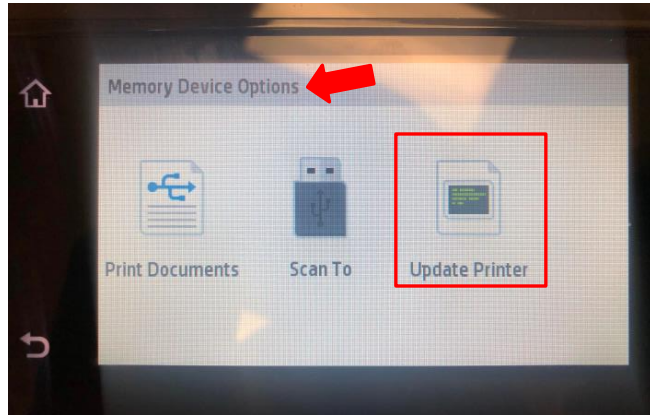

3. Copy the firmware **file** to a USB flash drive. *Make sure you don't copy the folder over. If the firmware is in a folder, the machine will not recognize it.*

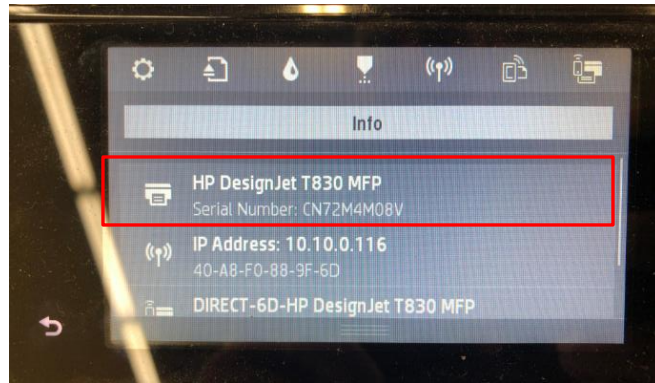

4. Plug the USB flash drive into the USB port on the left side of the printer.

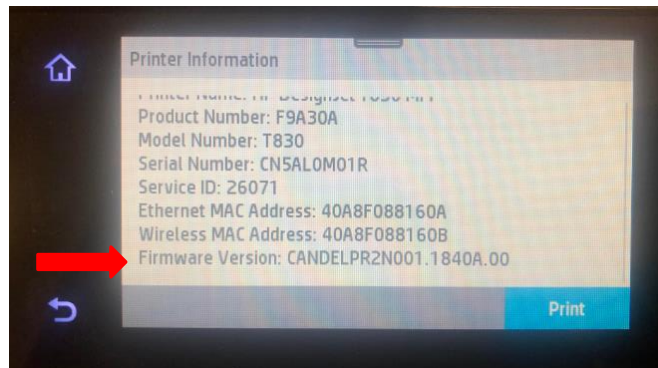

5. **Memory Device Options** will automatically appear on the front panel. Wait for **Update Printer** and select this option. *It might take a few moments for this to appear.*
6. Select **Upgrade Now** and follow the on-screen instructions. *The machine will install and restart during the process.*

7. Check the firmware was installed correctly by swiping down on the front panel and selecting the first option. *i.e. HP DesignJet T830 MFP*

8. Scroll to the bottom and confirm the **Firmware Version** matches the version you installed.
